

ZOMATO STAR SCHEMA

Definition of Key Measures, Calculated Columns and Their Analytical Use for Delivery Operations

Name	Type	Table	DAX Expression	Analytical Use	Explanation
Avg Delivery Time	Measure	Fact_Delivery	AVERAGE(Fact_Delivery[Time_taken (min)])	Delivery Efficiency	Calculates the average time required to complete deliveries.
Max Delivery Time	Measure	Fact_Delivery	MAX(FACT_Delivery[Time_taken (min)])	Delay Analysis	Identifies the longest delivery duration recorded.
Min Delivery Time	Measure	Fact_Delivery	MIN(FACT_Delivery[Time_taken (min)])	Best Performance	Shows the shortest delivery time achieved.
Total Deliveries	Measure	Fact_Delivery	COUNTROWS(FACT_Delivery)	Order Volume	Counts the total number of deliveries.
On-Time Deliveries	Measure	Fact_Delivery	CALCULATE(COUNTROWS(FACT_Delivery), FACT_Delivery[Time_taken (min)] <= 30)	Service Level	Counts deliveries completed within 30 minutes.
On-Time Delivery Rate	Measure	Fact_Delivery	DIVIDE([On-Time Deliveries], [Total Deliveries], 0)	Reliability KPI	Calculates the percentage of on-time deliveries.
Order Time Period	Calculated Column	Fact_Delivery	SWITCH(TRUE(), HOUR(Time_Orderd)>=5 && HOUR(Time_Orderd)<12,'Morning', HOUR(Time_Orderd)>=12 && HOUR(Time_Orderd)<17,'Afternoon', HOUR(Time_Orderd)>=17 && HOUR(Time_Orderd)<22,'Evening','Night')	Time Analysis	Categorizes orders by time of day.
Order Time Period Sort	Calculated Column	Fact_Delivery	SWITCH(TRUE(), HOUR(Time_Orderd)>=5 && HOUR(Time_Orderd)<12,1, HOUR(Time_Orderd)>=12 && HOUR(Time_Orderd)<17,2,	Visual Sorting	Ensures correct chronological sorting.

			HOUR(Time_Orderd)>=17 && HOUR(Time_Orderd)<22,3,4)		
Day of Week	Calculated Column	Dim_Date	FORMAT(Order_Date,'dddd')	Weekly Demand	Extracts weekday name from date.
DayOfWeek_N umber	Calculated Column	Dim_Date	WEEKDAY(Order_Date,2)	Sorting Support	Assigns numeric weekday values for sorting.
